Phone/Fax: (770) 554-9060 / (770) 554-3684	Age/Gender: 1 Year(s) / female
Practitioner: Dr Linda Marchman	Submitted Date: 01/08/2024 08:55:26 AM
Owner: Beth Robles	Completed Date: 01/08/2024 07:15:53 PM

Case Description: Completed / Regular / X-ray / Specific region(s)

Case History:

Preliminary hip and elbow radiographs

Case Report:

620060 KW/tr

Three digitalized radiographic images containing projections of the pelvis and elbows were submitted for evaluation. The radiographic request is dated 1/8/24.

Radiographic Findings:

Both femoral heads are well seated in their respective acetabula with approximately 50% of the femoral heads located medial to the dorsal acetabular rims.

Both femoral heads are congruous with the acetabula with slight widening of the medial aspect of both coxofemoral joints.

No osteophyte formation is present on the femoral necks or acetabula.

Alignment of the patellae with the femurs is normal.

Muscle volume in both hind legs is within normal limits.

The anconeal process of both ulnas and proximocranial aspect of both radii are smooth with no evidence of osteophyte formation.

No sclerosis is associated with the ulnar notches.

Both medial coronoid processes are smooth in contour and a fragment associated with the medial coronoid processes is not identified.

Diagnosis: Normal pelvis and elbows.

Comments: Radiographic changes to suggest elbow or hip dysplasia are not present. Based on the OFA scheme evaluating hips, the hips would be rated as good in conformation. Radiographs obtained at 2 years of age will need to be evaluated to completely exclude elbow and hip dysplasia and to establish a final rating on the coxofemoral joints.

Evaluations of Animals less than 12 months of age can be performed for private use of the owner.
However, certification will not be possible at this age.

OFA recommends that the test be repeated when the animal reaches 12 months of age.

TEST: BASIC CARDIAC

RESULTS: Normal cardiovascular examination via auscultation - No evidence of congenital or acquired heart disease was noted. Since acquired heart disease may develop later, these evaluation results remain valid for one year, and annual examinations are recommended to continue to monitor cardiac health.
